

Design and deployment of network services for the University of Home Affairs on Windows Server

Do Nhu Thuyet

Abstract: In practice, managing and providing efficient network services is an important issue for educational institutions. This topic focuses on designing and installing network services for the University of Home Affairs on the Windows Server platform to meet the needs for connectivity, information sharing, and network performance optimization. Through theoretical research combined with experimentation, the topic aims to build a stable, secure, and scalable network system, thereby enhancing the effectiveness of teaching and learning at the school. The expected results will contribute significantly to improving the technical infrastructure of the University of Home Affairs.

Keywords: Network services, Windows Server, University of Home Affairs, Network management, Network optimization
