

Building a food ordering application for small and medium-sized restaurants on the Android platform.

Hoang Nguyen Khanh Van

Abstract: In the context of the increasingly developing food service industry, especially for small and medium-sized hospitality services (SMHS), order management and enhancing customer experience have become urgent needs. This topic focuses on building a food ordering application for SMHS on the Android platform to optimize the service process and increase flexibility in order management. Through theoretical research, practical evaluation, and application deployment, the goal of this topic is to provide an effective technical solution to help SMHS restaurants improve work productivity while enhancing customer satisfaction. The expected results will bring significant business and management benefits to enterprises in this field.
