

Building a news aggregation system on Android

Nguyen The Hanh

Abstract: In the context of information digitization and the rapid development of mobile technology, this topic focuses on building a news aggregation system on the Android platform. The main goal is to provide users with fast and convenient access to diverse information sources from various channels. Through a combination of theoretical research and empirical methods, the topic will analyze current trends in the field of news aggregation, evaluate existing solutions, and propose improvements. The expected results not only contribute to enhancing the quality of information on mobile devices but also open up many potential applications for businesses and users.

Keywords: News aggregation system, Android, Mobile technology, Information aggregation, Mobile platform
