

Building a website for the Technology Information Center - Thai Nguyen Department of Science and Technology

Duong Thi Mai Anh

Abstract: In the context of increasingly powerful information technology development, building a professional website system to support the technology information center of the Thai Nguyen Department of Science and Technology plays an extremely important role. This project aims to design and deploy a Web application to provide information services and manage scientific and technical projects effectively. The research method combines surveying the current situation, analyzing requirements, and building the system according to the Agile process. The contribution of the project is not only to create a new technical support tool but also to help improve the information management capacity of the center.
