

Application of WebGIS technology to build a website introducing culinary locations in Thai Nguyen province

Nguyen Thi Ninh

Abstract: In the current context, accessing information about dining locations is becoming increasingly important. This topic aims to build a WebGIS system to provide comprehensive and updated information about dining places in Thai Nguyen province. Through theoretical research combined with application deployment, this topic not only meets users' information needs but also contributes to promoting the development of local tourism and commercial services. This is an important step in using GIS technology to improve the culinary experience for the community.

Keywords: WebGIS, GIS Application, Culinary Locations
