

Building a website for a store providing services to the Phu Luong - Thai Nguyen Telecommunications Center

Le Manh Tuan

Abstract: In the current context, building an online transaction system is an essential need for businesses in the telecommunications sector. This project aims to design and deploy an e-commerce website to provide services for the Phu Luong - Thai Nguyen Telecommunications Center, contributing to improving the management efficiency and customer service of the unit. The research methodology includes analyzing functional and non-functional requirements, designing user interfaces, and deploying the application based on modern technologies. The expected results will bring many practical benefits, while also contributing to the development of the telecommunications industry in Thai Nguyen.
