

Building A2 English exam preparation software on mobile devices

Nguyen Thi Hue

Abstract: In the context of the increasing demand for improving A2-level English skills, this topic focuses on building an effective test preparation software. The goal is to create a system that supports learners in self-studying via mobile devices, aiming to enhance their communication abilities and grammar knowledge through practical exercises. The research method combines educational theory with experimental mobile application development. The expected results provide a useful solution for both schools and individual learners, contributing to the promotion of cultural exchange and international communication.

Keywords: Exam preparation software, A2 English, Mobile devices, Online education, Educational technology
