

Developing a website to introduce the ATK Định Hóa - Thái Nguyên tourist area based on WebGIS technology

Phạm Thị Thanh Huyền

Abstract: In the context of sustainable tourism development, this topic focuses on developing a website to introduce ATK Định Hóa - Thái Nguyên tourist destinations through WebGIS technology. The main objective is to create a technical solution for effectively managing and presenting geographic information related to the tourism area. The research methodology includes a theoretical survey of WebGIS, system design, and practical application deployment on a web platform. The topic is expected to contribute to improving the quality of tourism services while providing a useful technical solution for the tourism industry.

Keywords: WebGIS, ATK Định Hóa tourism, introduction website, geographic information management, practical application
