

Research on Tabu algorithm. Application to the credit scheduling problem at the University of Information and Communication Technology.

Nguyen Thi Minh

Abstract: This topic aims to study and apply the Tabu algorithm in solving the credit scheduling problem at the University of Information and Communication Technology. With the goal of optimizing students' study schedules, the topic combines theoretical methods with experimentation to provide effective solutions. The results of this research not only contribute to improving training quality but also have high practical applicability.

Keywords: Tabu algorithm, Credit scheduling, University of Information and Communication Technology
