

Developing the WS Garden product, applying garden websites.

Nguyen Tat Thang

Abstract: In the context of the strong development of digital technology and the trend of searching for online information about agriculture, this topic focuses on developing the WS Garden product - a specialized web platform for gardeners. The goal is to build a system that provides smart management solutions for garden owners, from product marketing to optimizing plant care processes. The research method combines both theory and experimentation to ensure effectiveness and creativity in website design. The expected result is to provide a useful tool, promoting the sustainable development of the agricultural industry.

Keywords: Garden website, smart management, digital agriculture
