

Research on WebGIS technology and building a WebGIS page to support tourism at some pagoda sites in Bac Ninh province.

Pham Thi Thanh

Abstract: In the context of the strong development of information technology, the application of WebGIS technology to support tourism has become a popular trend. This project aims to research and build a specialized WebGIS page for pagoda tourist attractions in Bac Ninh province, contributing to optimizing the tourism experience and promoting local spiritual culture. Through a process of theoretical research combined with experimentation, this project expects to provide an effective GIS technology application solution, while affirming the feasibility and applicability of the project in practice.
