

Building an online internship registration website for Thai Nguyen University of Information and Communication Technology

Nguyen Thanh Do

Abstract: In the context of increasingly developed digitalization, building an online internship registration management system is an effective solution to enhance the quality of higher education. This project aims to design and deploy a website that helps students of Thai Nguyen University of Information and Communication Technology easily register for internships online. The research methodology includes requirements analysis, system design, and software development following ISO/IEC 25010 guidelines. The expected result is a flexible technical solution that meets practical needs, contributing to improving the efficiency of internship management.
