

Building an online registration and learning website for Thai Nguyen University of Education

Đoàn Thị Hương

Abstract: In the context of increasingly popular online education, this topic focuses on building a website system that allows students and lecturers of Thai Nguyen University of Education to easily register for courses and participate in online classes. The objective of the research is to explore technical requirements, design a user-friendly interface, and implement a practical solution. The research method includes analyzing needs and modeling the system before proceeding with web application development. The expected results will contribute to improving the quality of teaching and learning at the university, while expanding educational opportunities for students.
