

Building a website to support the management of the dormitory at Thai Nguyen University of Information and Communication Technology.

Hoang Thanh Thu

Abstract: This topic aims to meet the need for modernizing the management operations of the dormitory at Thai Nguyen University of Information and Communication Technology. The goal is to build a dedicated website system to support effective management, saving time and effort for administrative staff. Through theoretical research and experimental implementation, the topic will apply modern technologies such as HTML, CSS, JavaScript, and web frameworks. The expected results will bring higher work efficiency and better service quality for students and dormitory staff.

Keywords: Dormitory management website, Information technology, Application deployment, HTML5, CSS3
