

Building a road traffic law lookup application on the Android operating system

Pham Duy Duy

Abstract: This topic aims to meet the need for quick and convenient access to traffic legal regulations for citizens and organizations in practice. The goal is to develop a mobile application on the Android platform capable of searching and displaying information about road traffic laws directly on the user's device. Through theoretical research combined with practical implementation, the topic aims to provide a useful solution for citizens and support state management in the field of traffic safety.

Keywords: Traffic law lookup, Android, mobile application, traffic safety management
