

Building a photo editing application on the Android platform

Hoang Duy Hoang

Abstract: In the context of the growing development of information and communication technology (ICT), the use of photo editing applications on mobile devices has become widespread. This topic focuses on building an effective photo editing application that meets users' needs for personalization and artistic creation. Through theoretical research and experimental implementation, the goal of this topic is to develop a system that allows users to easily manipulate various professional photo editing tools on the Android platform. The expected results will affirm the high applicability of this application in the mobile software market.
