

Testing the "ICTU Social" application on Android

Do Thi Anh Hong

Abstract: This topic focuses on the testing process of the ICTU Social application developed on the Android platform. The context of the topic aims to meet the communication and information sharing needs of the student and lecturer community within the university. The objective of the research is to ensure the stable, efficient, and secure operation of the application's features. The method combines system testing and user testing to evaluate the application's quality. Through this, the topic expects to achieve results of practical significance, contributing to improving the quality of digital services in the educational environment.

Keywords: Application testing, Android, ICTU Social, School communication, Information security
