

Building and developing an artistic photo design application combined with using quotes on the Android platform

Hoang Van Luc

Abstract: In today's digital age, the demand for decorating content with artistic images containing philosophical messages is considered a new trend. This project aims to develop a mobile application based on the Android platform, using AI technology to automate the process of selecting and integrating quotes into image designs. Through theoretical research on graphic design and AI, this project not only creates unique artistic products but also provides users with a fresh experience when enjoying content through artistic images. The expected results of this project will significantly contribute to improving the performance and quality of content on digital platforms.
