

Building the social network application "ICTU-Social" for students and lecturers of the University of Information and Communication Technology.

Nguyen Van Quan

Abstract: In the context of the increasing use of information technology in education, this topic focuses on building the social network application 'ICTU-Social' to improve communication and collaboration efficiency between students and lecturers at the University of Information and Communication Technology. The main objective is to create a digital platform that supports information sharing, organizes online learning activities, and enhances the interactive experience for both parties. The research method is based on a combination of educational social network theory and practical application deployment. It is expected that this topic will make an important contribution to the development of teaching-learning support technology, while providing a practical solution for universities.
