

Building a support system for assignment and schedule management for teachers at the University of Information and Communication Technology.

Bui Van Hieu

Abstract: In the increasingly developing context of the Information Technology (IT) industry, effective management of teachers' time and work is an urgent need. This topic focuses on building a system to support the assignment of work schedules for teachers at the University of Information and Communication Technology (ICTU), aiming to optimize working time, enhance productivity, and improve management efficiency. Through theoretical research and experimental implementation, this topic is expected to contribute new technical solutions to the field of teacher management in the school environment.

Keywords: Management support system, University lecturer, Information technology, Work schedule assignment, Time optimization
