

Building an English Communication Learning Application on the Android Platform

Pham Ngoc Hoa

Abstract: In the context of increasing attention to communication skills education through foreign languages, this topic focuses on developing a mobile application to support users in improving their English communication abilities. The objective of the work is to design and implement an interactive learning system on the Android platform to provide practical lessons, listening and speaking practice through conversational videos. The research method combines language education theory with experimentation during the application development process. The expected result is a useful tool that helps users effectively enhance their English communication skills through convenient and self-paced learning on mobile devices.
