

Build a slider function for Shopify e-commerce products.

Nguyen Hao Quang

Abstract: This topic aims to research and develop an effective slider function for products on the Shopify e-commerce platform. With the goal of optimizing user experience and increasing the visibility of product information, the topic applies a combined approach between theory and experimentation to build and deploy the solution. The expected outcome of the topic is to provide a practical application solution that helps businesses improve service quality and enhance competitiveness in the e-commerce market.

Keywords: Slider function, Shopify, E-commerce, Capstone Project, System architecture
