Build a temple website according to the standard ThemeForest template.

Nguyen Truong Son

Abstract: In the context of the strong development of the internet and the trend of using websites as effective online marketing tools, this project aims to build a website template meeting the high standards of ThemeForest. This research not only focuses on analyzing necessary design elements but also applies modern technologies to create a solution that meets the diverse needs of businesses. Through theoretical and experimental research, the project expects to contribute to the community by providing a high-quality, easily customizable template, ensuring efficiency in website management and enhancing user experience.
