

Building an English learning support application on the Android operating system

Nguyen Duc Tien

Abstract: In the context of today's education, learning foreign languages such as English is an urgent need to enhance communication skills and expand knowledge. This topic focuses on building an English learning support application on the Android operating system, aiming to provide effective listening, reading, writing, and speaking practice functions. The research method combines language education theory with mobile application development experimentation. The application is expected to bring convenience and flexibility to users in the learning process, while contributing to the development of educational support technology.
