

Build a sales website for Minh Quang computer store.

Nguyen Hoang Anh

Abstract: In the context of increasingly strong digitalization, building a professional sales website for Minh Quang computer store not only meets the diverse needs of customers but also helps improve business efficiency. This project aims to develop a comprehensive e-commerce automation system, including a user-friendly interface and flexible product management processes. Through a combination of theoretical research and experimentation, this project not only solves existing problems but also provides Minh Quang with an effective marketing tool. The expected result is that the website will create opportunities to reach new customers and increase sales.
