

Building a room rental management software for Tung Thao Nguyen enterprise using Windows Phone technology

Pham Ngoc Diem

Abstract: In the context of increasing demand for efficient asset management, this topic focuses on building a room rental management software system based on the Windows Phone platform. The main objective of the research is to address the problem of organizing and managing room rental information in a professional and optimized manner for Tùng Thảo Nguyễn enterprise. The implementation process combines real-world requirement analysis with application deployment to ensure the system's stability and efficiency. The expected results will significantly contribute to digital asset management solutions in the real estate sector.
