

Testing Shopify e-commerce products using some automated testing tools

Cao Thi Thanh Hien

Abstract: In the rapidly developing context of e-commerce, ensuring product quality on the Shopify platform has become more important than ever. This topic aims to evaluate the effectiveness of automated testing tools in the product inspection process on Shopify. Through theoretical and experimental research, the topic will provide optimal solutions for testing e-commerce systems. The expected results will confirm the wide applicability and make a novel contribution to the information technology industry.
