

Build an online news website using ASP.NET

Vu Van Hinh

Abstract: This topic focuses on building an online news website system with the goal of optimizing user experience and providing fast information updates. The context for selecting this topic is determined by the increasing demand for diverse information sources from the internet. The research methodology includes both theoretical research on web content management and practical application deployment using ASP.NET. The expected result is a flexible solution for organizations that need to provide online news services, while also contributing to the development of modern web technology.

Keywords: Online news website, ASP.NET, Web content management, Information technology, Applied research
