

Build a technology news website

Bui Xuan Bach

Abstract: In the context of increasingly widespread digitalization, building a system for managing and displaying technology news information has become essential for organizations and individuals. This project aims to develop a website that provides fast, updated content on the latest technology worldwide. Using a combination of theoretical research and empirical methods, the project applies modern programming techniques to build a user-friendly and efficient interface. The expected result is a robust digital platform that contributes to raising technology awareness in the community.
