

Building a job search website for Thai Nguyen province

Do Xuan Dat

Abstract: In the context of increasing digitalization, building a web system to support workers and businesses in Thai Nguyen province in job searching and recruitment has become an urgent need. This project aims to design and implement a job search website suitable for the local socio-economic conditions, meeting diverse job information requirements and improving recruitment efficiency. The research methodology includes analyzing the current labor market, surveying target users, designing user interfaces, and deploying the system. The project hopes to contribute to the economic development of Thai Nguyen province while enhancing the quality of employment support services for the local community.
