

Method for building a standard ThemeForest-compliant Theme on the open-source WordPress platform

Pham Van Huy

Abstract: In the fast-growing context of e-commerce websites and digital content, user interface design has become more important than ever. This topic focuses on building a standard premium theme following the ThemeForest model on the open-source WordPress platform, aiming to meet the need for enhancing user experience and optimizing online advertising effectiveness. Through theoretical research on user interfaces and practical implementation, this project hopes to contribute a flexible solution for web developers and businesses using WordPress.

Keywords: Hanging theme, Forest theme, WordPress, interface design, e-commerce
