

Building a postgraduate admission website for the University of Information and Communication Technology - Thai Nguyen.

Nguyen Thi My Ly

Abstract: In the context of increasing digitalization, building a professional graduate admissions information system is necessary to enhance efficiency in the process of accessing and selecting training programs. This project aims to design and implement an online website to provide information about academic programs, admission regulations, and support the application and admission process for students. Through a combination of theoretical research and experimentation, this project seeks to contribute to improving the quality of admissions services and enhancing user experience. The expected outcomes of the project will include an effective technical solution that meets the diverse information needs of the participants.
