

Building a news reading application on the Android platform

Nguyen Thi Kieu Nhung

Abstract: This topic focuses on designing and implementing an online news reading application for the Android platform, aiming to meet the need for quick access to information from various sources. Through theoretical research on mobile application development and experimentation with new technologies, the topic seeks to provide an effective solution for users to easily read electronic newspapers from their mobile phones. The expected results will contribute to promoting the development of the digital media industry and enhancing user experience in accessing journalistic content.

Keywords: Android application, online news reading, mobile technology, digital media, mobile application
