

Building a warehouse management program for Son Nhung Company Limited - Thai Nguyen City

Nguyen Van Tuyen

Abstract: In the context of increasingly complex supply chain management, this topic focuses on building an effective warehouse management system for Son Nhung Company Limited in Thai Nguyen City. The objective of the research is to solve the problem of optimizing the storage and warehouse operation process through the implementation of software-based management technology. The research methodology includes analyzing the current situation, system design, and trial deployment at the company. It is expected that the topic will significantly contribute to improving the warehouse management capacity of Son Nhung Company Limited and can be expanded for application to other businesses in the future.

Keywords: Warehouse management, management software, supply chain system, information technology, Son Nhung Company Limited
