

Application of Intel Galileo 2.0 Kit in personal email management and checking.

Ta Quang Chien

Abstract: This topic aims to explore the necessity of managing and checking personal email in practice and solving the problem through the application of the Intel Galileo 2.0 Kit. The project combines theoretical research with application deployment to build a system that automates the email checking process, thereby improving the efficiency of personal information management. The objective of the topic is to provide a suitable and feasible technical solution, while contributing to the field of research on personal data security.

Keywords: Intel Galileo 2.0 Kit, Email Management, Automated Testing, Personal Data Security, System Automation
