

Building MultiView software over mobile P2P network

Nong Thi Mai

Abstract: This topic focuses on building the MultiView software system over mobile Peer-to-Peer (P2P) networks, aiming to solve the problem of diverse content transmission in social media and educational applications. The objective of the research is to design and implement an effective solution that allows users to quickly access and share information in a mobile environment. The approach combines P2P theory with experimentation to optimize system performance. It is expected that the completion of this topic will provide a versatile application tool for educational organizations and businesses, contributing to the advancement of mobile communication technology.

Keywords: MultiView, Peer-to-Peer (P2P), Mobile Software, Social Media, Digital Education
