

Building a website to manage and monitor some patient health parameters in real time

Nguyen Dinh Hoa

Abstract: In the context of increasingly advanced healthcare, real-time management and monitoring of patient health parameters has become essential. This project focuses on building a website with the main goal of providing a technical platform to support a multi-functional health monitoring system. Through the research and implementation process, the project will apply modern technologies to ensure the system's efficiency and safety. The expected outcomes of this project will not only contribute to improving the quality of healthcare services but also open new research directions in the field of health information management.
