

Open source software-based cybersecurity solution

Nguyen Kim Anh

Abstract: This topic aims to address cybersecurity issues through the use of open-source software. The objective of the research is to build an effective, flexible, and sustainable security system. By synthesizing the latest technologies in the open-source field, the topic applies a combined theoretical and experimental approach to develop a comprehensive cybersecurity solution. The expected results will provide a robust security system for businesses and organizations, while also contributing to the development of the open-source community.

Keywords: cybersecurity, open source software, enterprise security, security systems, open source technology
