

Assessment of 3G mobile network quality in Thai Nguyen city

Đồng Văn Đỗ

Abstract: In the current context, the development of mobile technology has created increasingly high demands on service quality. This topic focuses on evaluating the quality of 3G mobile communication networks in Thai Nguyen city with the aim of understanding and analyzing factors affecting data transmission performance. The research method combines theory and experimentation, thereby proposing improvements to enhance service quality. The expected results contribute to optimizing 3G networks in urban areas.
