

Provincial-level regional mobile information network planning

Nguyen Le Hoang

Abstract: This topic focuses on mobile information network planning at the provincial level to meet diverse user needs. The main objective is to build a system that optimizes performance and service quality in a mobile environment. The research methodology includes applying modern models and algorithms, combined with experiments on real infrastructure. The expected outcomes of the topic not only enhance understanding of mobile network planning but also provide practical solutions to support network management decisions for authorities.

Keywords: Network planning, Mobile communications, Provincial level, Optimization algorithm, Experimentation
