

Application of Anime Studio Pro software in digital film production

Le Tuan Anh

Abstract: This topic aims to research and apply Anime Studio Pro software in the digital film production process, meeting high demands for image quality and modern digital effects. Through a combined theoretical and experimental approach, the topic will analyze the strong features of this software in creating 2D animation scenes. The goal is to build an effective support system for the digital film production process, contributing to enhancing the creative capacity and work efficiency of the film editing team. The expected results of this topic will not only affirm the practical application of Anime Studio Pro in the field of animation production but also provide researchers with a new perspective on digital graphic design tools.
