

Building an accounts payable program for suppliers at Vietnam Simulation Technology Investment and Development Joint Stock Company

Tran Thi Anh

Abstract: This topic aims to research and build an accounts payable management system suitable for the actual business operations of Vietnam Simulation Technology Investment and Development Joint Stock Company. By integrating modern accounting methods, the topic will help improve financial management efficiency, minimize risks, and enhance the ability to control debts. The research method is based on a combination of accounting theory and practical application implementation within the enterprise. The expected result is an effective solution contributing to the sustainable development of the company.

Keywords: Accounts payable, financial management, information systems, simulation technology, supplier
