

Building a cash accounting program at Muong Te District Health Center, Lai Chau Province

Phung Uy De

Abstract: In the context of increasing attention to financial management, this study aims to address the limitations in operating the cash accounting system at Muong Te District Health Center. The objective is to develop and implement an automated system for the cash accounting process to enhance transparency and management efficiency. The research methodology combines an analysis of the current situation, proposing solutions, and developing a suitable application program. Through this, the study hopes to contribute to the sustainable development of the local healthcare sector by improving the cash accounting process.
