

Building an online training website for the Center for Information Technology in Economics - University of Information and Communication Technology, Thai Nguyen

Nguyen Van Dung

Abstract: In the context of the strong development of digital technology, building an online training website system for the Center for Information Technology and Economics (CNTTKT) is necessary to improve educational quality and meet the continuous learning needs of students. This project aims to build and deploy an online training website system, including online courses, personal learning management, assessment, and feedback. The research method combines web design theory with application deployment experimentation. The expected results of the project will not only help CNTTKT expand its operational scale but also provide students with flexible learning opportunities, contributing to the development of high-quality information technology human resources.
