

Building an accounting program for accounts receivable and payable at Sonia Fashion and Trading Services Company Limited, Hanoi.

Dao Thi Thu Huyen

Abstract: In the context of increasingly professionalized financial management, this topic focuses on building an automated accounting information system for accounts receivable and payable at Sonia Fashion and Trading Services Company Limited. The objective of the research is to address the current inefficiencies in managing receivables and payables through the application of information technology. The methodology is based on a combination of reviewing scientific literature and applying it to the company's actual operations. It is expected that the system will enhance the company's financial management efficiency while providing employees with a powerful tool for recording and analyzing accounting data.
