

Building a website structure analysis tool at Vietnam Online Technology Solutions Company Limited OSVN, Thai Nguyen

Nguyen Thi Ngan

Abstract: This topic aims to research and develop a website structure analysis system suitable for the practical requirements of Vietnam Online Technology Solutions Company Limited (OSVN). Through analysis, the topic identifies necessary issues and the main objective is to build a tool to support the process of checking and optimizing website structure. The research method includes synthesizing theories on web architecture combined with experiments at the company to deploy the application. The significance of the topic lies in its ability to provide a comprehensive solution to improve service quality and user experience, thereby contributing to the sustainable development of OSVN.

Keywords: Website structure analysis, Website testing, Online technology
