

Building an inventory accounting program at TNG Thai Nguyen Investment and Trading Joint Stock Company, Viet Duc Garment Branch.

Nguyen Thi Phuong Thao

Abstract: In the context of increasingly professional financial management, building an inventory accounting management system is extremely necessary. This project aims to develop a computer program to automate the inventory counting and data analysis process at TNG Investment and Trading Joint Stock Company, Viet Duc Garment Branch. Through theoretical research combined with experimentation, the project offers the ability to optimize raw material management, reduce the risk of loss, and enhance business efficiency. The expected results of this study not only contribute to improving the company's accounting system but also open up potential for widespread application in similar enterprises.
