

Building an accounting program for raw materials at Thai Nguyen Consulting and Construction Investment Joint Stock Company - TCICO

Vu Thi Thoa

Abstract: In the context of increasingly complex financial management, this topic aims to research and design a scientific material management system for Thai Nguyen Construction Consulting and Investment Joint Stock Company (TCICO). The project's objective is to build and implement an effective raw material accounting program to optimize asset management processes. The approach includes theoretical research on financial management combined with experimental application of technology to the internal accounting system. Expected results will bring significant improvements in resource management and enhance TCICO's competitiveness.
