

Building accounting software for raw materials for the Foreign Economic Support and Development Joint Stock Company - Hanoi

Nguyen Thi Hai Yen

Abstract: In the context of increasingly complex financial management, building material accounting software plays an important role in optimizing capital control processes. This topic focuses on developing a software system to effectively support the management of input and circulation of raw materials at the Joint Stock Company for Foreign Economic Support and Development - Hanoi. Through the research process, the topic combines theoretical and experimental methods to ensure the feasibility and applicability of the system. The expected results will bring significant improvements in financial management performance and enhance the company's competitiveness.

Keywords: Accounting software, Material management, Financial management system
