

Building a website to support online English learning

Chu Ba Chien

Abstract: In the context of the growing development of online education, this topic focuses on building a Website that provides tools to support online English learning. The main objective of the project is to create a diverse and flexible learning environment to enhance learning effectiveness for learners. Through a process of theoretical research combined with experimentation, the topic applies modern technologies to develop a user-friendly interface and rich learning content. The expected results of this project will significantly contribute to expanding the online education infrastructure and improving the quality of English teaching.

Keywords: Learning website, Online education, Technology supporting English learning
